Sports-Live

What is the idea?

A single application which will show various information of your favorite sports.

Sports the app will cover are
- Cricket
- Football
- Tennis / Badminton

Under each category it will have
- Ongoing matches
- Scorecard
- Historical matches
- Player, Team and Match statistics

Users can follow certain Team or Sport and they'll get
- Personalized notifications
- Filtered list of events
- Curated news

Target Audience

For each sport app will have
- International matches and leagues (FIFA, World Cup, etc)
- Indian leagues (ISL, IPL, etc)

Primary user base would be users residing in India.

Process

- Data for matches and stats would be fetched from an external API.
- User related information would be stored in the app's DB.

Technical Feasibility

Open source and reliable softwares-frameworks will be used, hence it is technically feasible

- NodeJS with Express for back-end server.
- ReactJS for front-end.
- *Will decide on DataBase later*

Operational Feasibility

This will be a web application which will be mobile responsive as well so users will be able to view it on their PC as well as mobile device.

Economical Feasibility

Personalized content will be given to users as a premium feature for which they have to pay a subscription fee.

Future Enhancements

- Including more sports in the app
- Match predictions
- Live commentary

Unique Selling Point

Having to google everytime for different sports events that you usually watch is a tedious task.
We propose a single app which will incorporate multiple sports events and news so you don't have to search or browse at multiple locations.
Moreover, you can follow your favorite team or sport to get personalized notifications and you won't miss the latest news.
